EXPERIENCE

Analyst IT · Teleperformance India

2025 – Present

Hyderabad, India

- Contributed to research and evaluation of Enterprise -grade AI Troubleshooting Engine for Network Operations Center workflows, covering GenAI initiatives for enterprise use cases.
- Engaged in prompt engineering, RAG architecture exploration, and Gen AI tooling to support project delivery.
- Proactively built and published ragkitpy, an open-source Python RAG pipeline package, bridging bench time with hands-on technical growth.

Backend Developer Intern · MH Cognition

Jan 2025 – Jun 2025

Chennai, India

- Contributed to core backend modules for a Learning Management System (LMS).
- Engineered a scalable task scheduling system using Django Celery for time-based assignment activation and automated workflow triggers.
- Developed REST APIs for attendance tracking, subject/project management, and a student ranking engine using Django REST Framework and MySQL.
- Collaborated in an agile environment, contributing to API design, ORM query optimization, and code reviews.

PROJECTS

NOC-GPT — Predictive Troubleshooting Engine

(AI Portfolio)

Python · FastAPI · SQLite · TF-IDF · XGBoost · FAISS · Groq · Llama 3.3 70B

- Built an AI system for NOC issue triage: classifies alert type with TF-IDF + Logistic Regression, predicts severity with XGBoost, retrieves similar incidents via FAISS semantic search, and generates remediation plans using Llama 3.3 70B through the Groq API.
- Designed a FastAPI backend with modular endpoints for each ML stage, and a streamlit dashboard for engineer querying and prediction visualization.
- Demonstrates full MLOps thinking: modular pipeline stages, API-first design, and production-deployable architecture.

ragkitpy — Open-Source RAG Pipeline Library

(Published on PyPI)

Python · sentence-transformers · FAISS · pypdf · PyPI

- Designed and published a lightweight developer-friendly RAG toolkit supporting PDF ingestion, chunk embedding (all-MiniLM-L6-v2), FAISS vector indexing, and semantic retrieval via a simple API.
- Structured with full unit test coverage and CI-ready layout; documented via a 'building in public' LinkedIn series demonstrating ability to ship and maintain open-source Python packages.
- Serves as a reusable foundation for LLM-powered Q&A applications, document search, and knowledge base systems.

TECHNICAL SKILLS

AI / GenAI: LLM APIs (Groq, OpenAI), RAG Pipelines, Prompt Engineering, FAISS, sentence-transformers

ML / Data: Scikit-learn, TF-IDF, PyTorch, Pandas, NumPy, Jupyter

Backend: FastAPI, Django, Django REST Framework, Celery, SQLite, MySQL, REST APIs

Languages: Python (primary), SQL, Java

Tools: Git, GitHub, PyPI publishing, Postman, Streamlit

EDUCATION

B.Tech in Computer Science & Engineering (AI & ML)

Malla Reddy University, Hyderabad

2021 – 2025

CGPA: 8.71
